

FAIZAN NAIKWADI

Aspiring DevOps Engineer | Cloud & Automation Enthusiast

Kolhapur, Maharashtra, India | +91 9370380640 | faizannaikwadi03@gmail.com | linkedin.com/in/faizan-naikwadi | github.com/faizan11n

Graduation: 2026 | Open to Full-Time & Internship Opportunities

PROFESSIONAL SUMMARY

Cloud and DevOps-focused engineer with practical, project-based exposure to AWS, Linux system administration, Docker, Jenkins, Git/GitHub, Terraform, and Ansible. Comfortable with cloud provisioning, containerization, CI/CD workflows, configuration management, and infrastructure automation through hands-on projects and structured technical training. Familiar with Python and Bash scripting, AWS monitoring, SSH, networking fundamentals, IAM, VPCs, and security groups.

SKILLS

- Linux Administration (CLI, file & directory permissions, user/group management, basic troubleshooting)
- AWS Cloud (EC2, S3, IAM, EBS, SNS, SQS, CloudWatch, VPC/subnetting basics)
- Docker & Containerization (Dockerfiles, images, containers, volumes, Docker Hub)
- Kubernetes (Deployments, Services, ConfigMaps, Horizontal Pod Autoscaler)
- Terraform (Infrastructure as Code — init, plan, apply)
- Ansible Automation (playbooks, inventory, roles)
- Jenkins CI/CD Pipelines (Jenkinsfile, GitHub webhooks, automated build/deploy)
- Git & GitHub (version control, branching, commits, pull requests)
- Python & Bash Scripting
- Networking Fundamentals (TCP/IP, DNS, HTTP/HTTPS, SSH, subnetting, firewall/security-group concepts)
- Problem Solving, Troubleshooting & Team Collaboration

PROJECTS

End-to-End CI/CD Pipeline for Containerized Deployment *Tech: Jenkins, Docker, GitHub, AWS EC2*

Solves: manual build-and-deploy steps slow down releases and introduce human error — automated the full path from commit to running container.

- Configured a GitHub webhook to trigger a Jenkins pipeline automatically on every push, removing manual build steps.
- Authored a Jenkinsfile that builds a Docker image, tags it by build number, and pushes it to Docker Hub as part of the pipeline.
- Automated container redeployment on an AWS EC2 instance via the pipeline, replacing the running container with the new image with zero manual intervention.

Kubernetes Cluster Deployment with Infrastructure as Code *Tech: Kubernetes, Terraform, Docker, AWS*

Solves: manually provisioned, single-container deployments don't scale or self-heal — moved the workload to an orchestrated, IaC-provisioned cluster.

- Provisioned the underlying AWS infrastructure (EC2 instances, networking, security groups) using Terraform for a repeatable, version-controlled cluster setup.
- Deployed a containerized application to Kubernetes using Deployment, Service, and ConfigMap manifests, sourcing the image from a Docker Hub registry.
- Configured liveness/readiness probes and a Horizontal Pod Autoscaler, demonstrating self-healing and load-based scaling.

Full Infrastructure Automation: Terraform + Ansible + Docker *Tech: Terraform, Ansible, Docker, AWS EC2, Git*

Solves: provisioning and configuring infrastructure as separate manual steps doesn't scale across environments — codified both into a single automated flow.

- Authored Terraform configurations to provision AWS infrastructure end-to-end (VPC, subnets, security groups, multiple EC2 instances, load balancer).
- Chained an Ansible playbook to run immediately after provisioning, automatically installing Docker and deploying the application across all servers with zero manual touches.
- Version-controlled the full infrastructure and configuration codebase in Git, enabling a complete environment rebuild with a single command.

WORK EXPERIENCE

DevOps Training Program *CloudSub Technology, Pune*

- Completed practical, hands-on training covering Linux system administration, AWS cloud fundamentals, Git/GitHub version control (including branching and pull requests), Jenkins CI/CD pipelines, and Docker containerization.
- Practiced real-world DevOps workflows including server setup, source code management, build automation, and container deployment under guided training sessions.
- Gained working exposure to configuration management concepts using Ansible and basic scripting with Python and Bash.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science Engineering *Dr. D. Y. Patil Technical Campus, Talsande,*

Kolhapur | 2022 – 2026
